INTERNATIONAL AS PHYSICS

Unit 2 Electricity, waves and particles

Tuesday 23 May 2023

07:00 GMT

Time allowed: 2 hours

Materials

For this paper you must have:

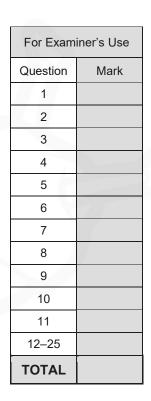

- a Data and Formulae Booklet as a loose insert
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate
- a protractor.

Instructions

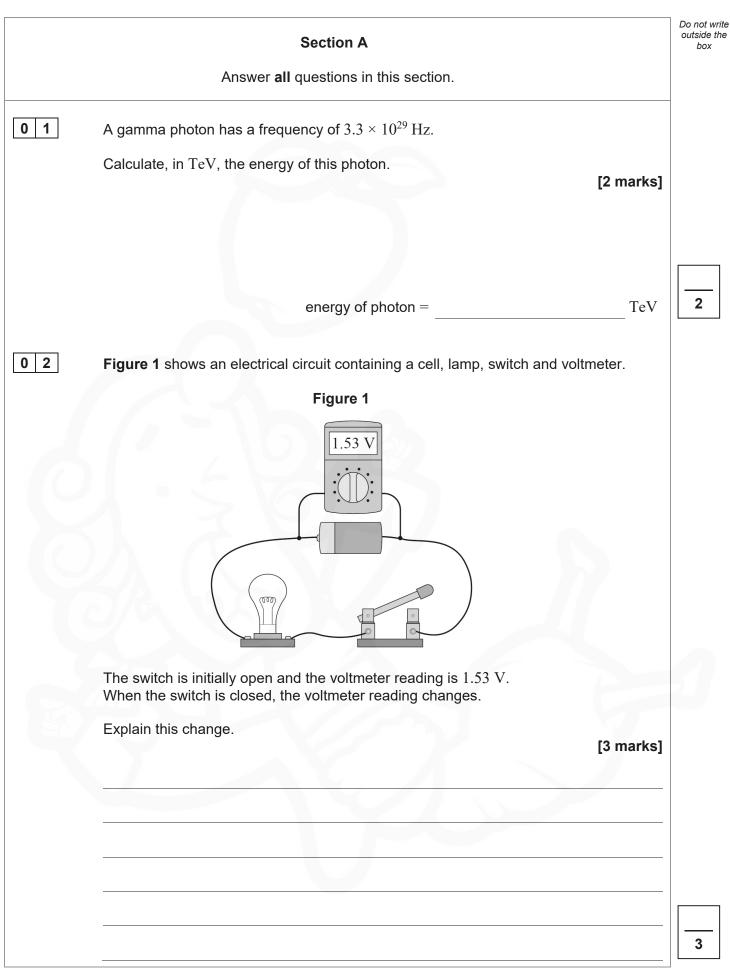

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- All working must be shown.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

04	A communications system sends information through an optical fibre as pulses of light. Pulse broadening limits the rate at which the information can be transmitted in the system.	Do not outsid bc
0 4.1	Explain how material dispersion causes pulse broadening in the optical fibre. [2 marks]	
04.2	Explain why the maximum rate at which information can be transmitted depends on	
	the length of the optical fibre. [2 marks]	
		4
		6

0 5.1	Ultrasound waves are used for imaging in hospitals.	Do not write outside the box
	State one other medical application of ultrasound. [1 mark]	
0 5.2	One ultrasound imager emits waves of frequency 3.2 MHz. Table 1 shows the speeds of the ultrasound waves as they pass through three types	
	of tissue in a human body.	
	Table 1	
	Body tissue Speed of wave / km s ⁻¹	
	fat 1.4	
	muscle 1.6	
	bone 3.5	
	Determine the maximum wavelength of the ultrasound as it passes through the body. [2 marks]	
	maximum wavelength = m	3

	 Figure 3 shows a stationary wave W on the full length of a vibrating string at a particular time <i>t</i>. The stationary wave W can be described as the superposition of two progressive waves X and Y. X and Y have the same frequency and travel in opposite directions.
	The dashed line on Figure 3 shows the position of X at time <i>t</i> . Figure 3
	Key ————————————————————————————————————
. 3	State which harmonic of W is shown in Figure 3 .

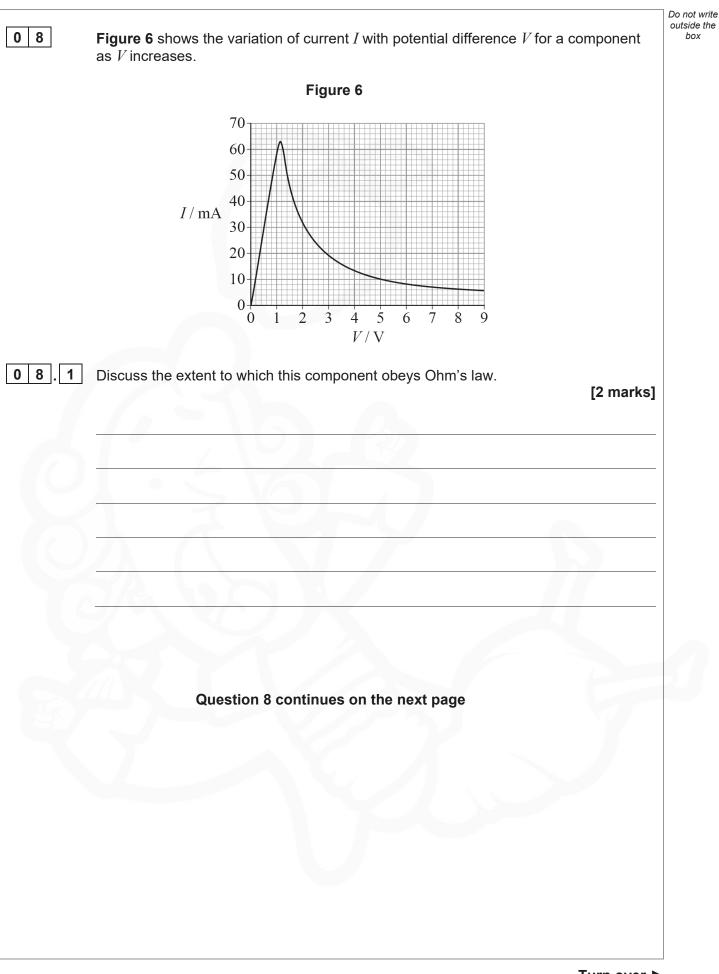

box

		Do not write
0 7.5	The accelerating potential difference V is now increased, causing the fringe spacing to change.	box
	Explain the change to the fringe spacing. [2 marks]	
0 7.6	Monochromatic light passes through a double slit. Coherent light from the two slits produces a fringe pattern similar to that in Figure 5 .	
	Explain why this fringe pattern occurs. [3 marks]	
		12

IB/M/Jun23/PH02

Do not write outside the box Figure 7 shows a thermistor T in a circuit. The circuit is used to monitor the temperature of water. The battery has an emf of 10.0 V and negligible internal resistance. The fixed resistor **R** has a resistance of $6.1 \text{ k}\Omega$. Figure 7 10.0 V R V Figure 8 shows how the voltmeter reading varies with the temperature of T. Figure 8 11.0 10.0 9.0 8.0 7.0 6.0 voltmeter reading / V 5.0 4.0 3.0 2.0 1.0 0.0 Ó 10 20 30 40 50 60 70 80 90 100 temperature / °C

0 8.2	Explain why the voltmeter reading changes as the temperature increases. [2 r	Do not write outside the box narks]
0 8.3	Show that the resistance of T at 55 °C is approximately 900 Ω .	narks]
	Question 8 continues on the next page	

Figure 9 shows a modification to the circuit with a second fixed resistor **S** parallel to **T**.

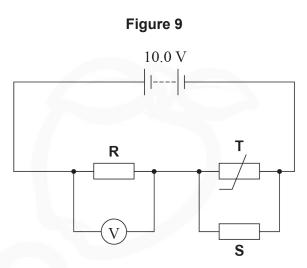

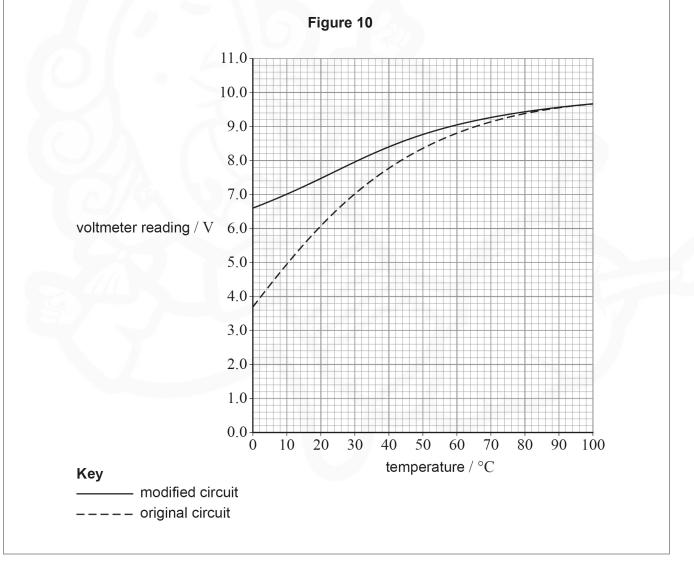

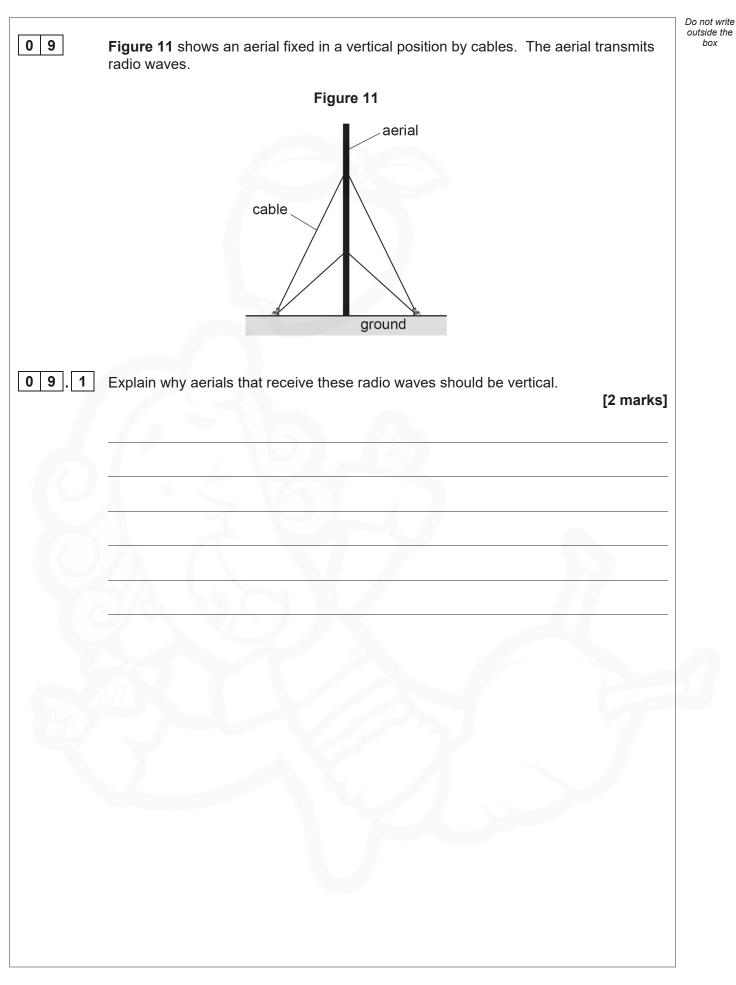

Figure 10 shows how the voltmeter reading now varies with the temperature of **T** for this modified circuit. **Figure 10** also shows the voltage variation with temperature for the original circuit in **Figure 7**.

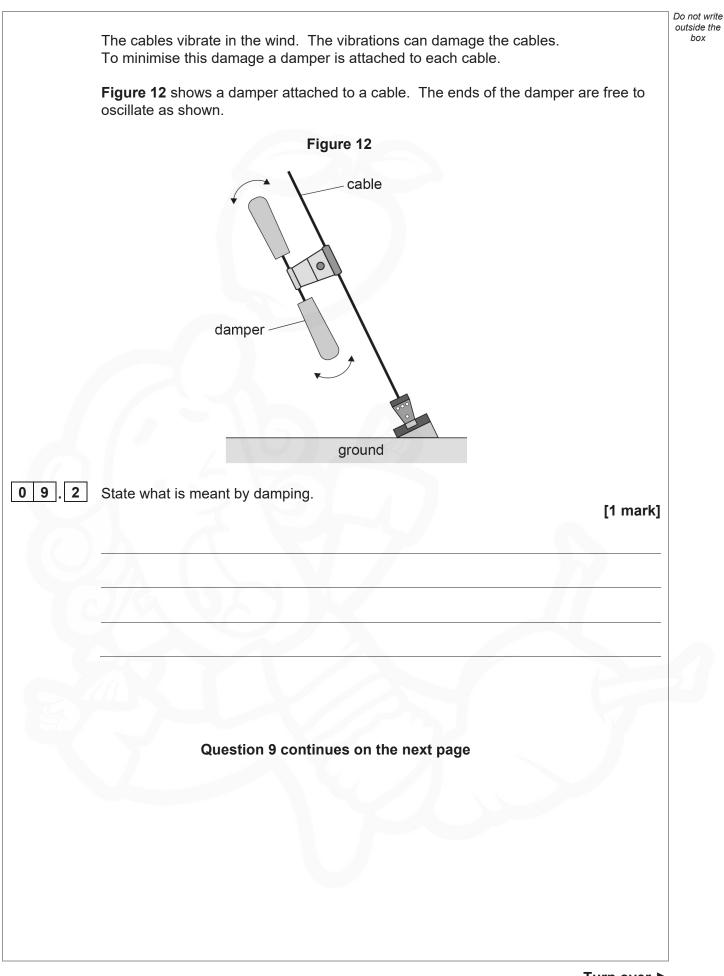

08.4	The current in R is 1.46 mA when the temperature of T is 55 °C.	Do not write outside the box
	Determine the resistance of S . [3 marks]	
	resistance of S = Ω	
0 8.5	Suggest one disadvantage of using the modified circuit rather than the original circuit	
	to monitor the temperature of the water between 0 $^{\circ}$ C and 100 $^{\circ}$ C. [1 mark]	
		10
	Turn over for the next question	

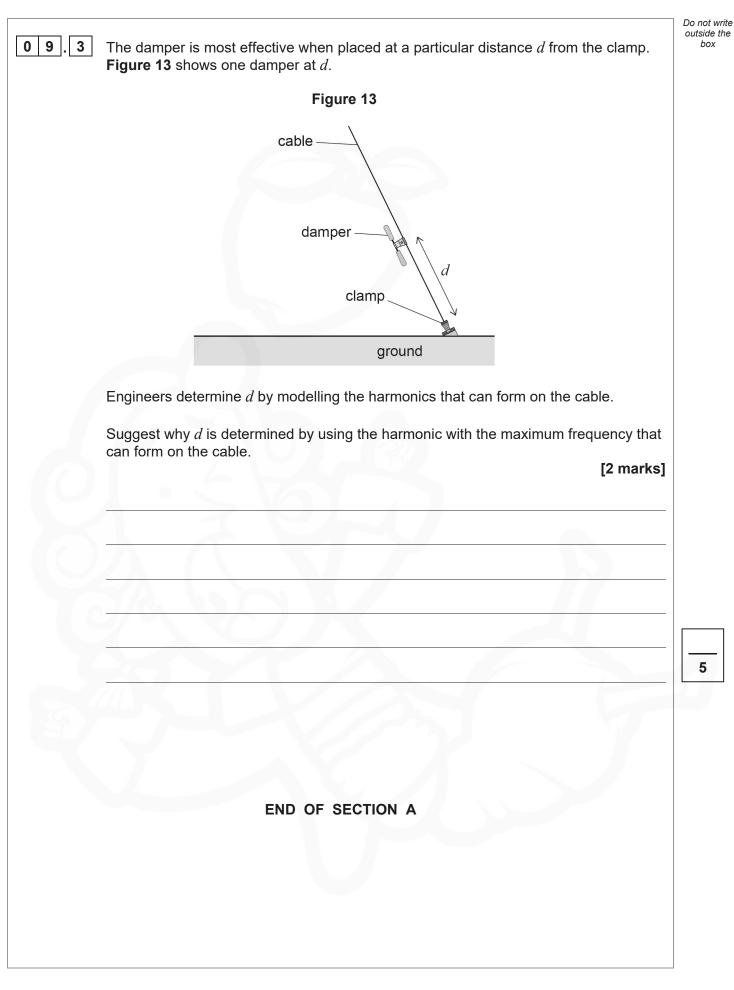

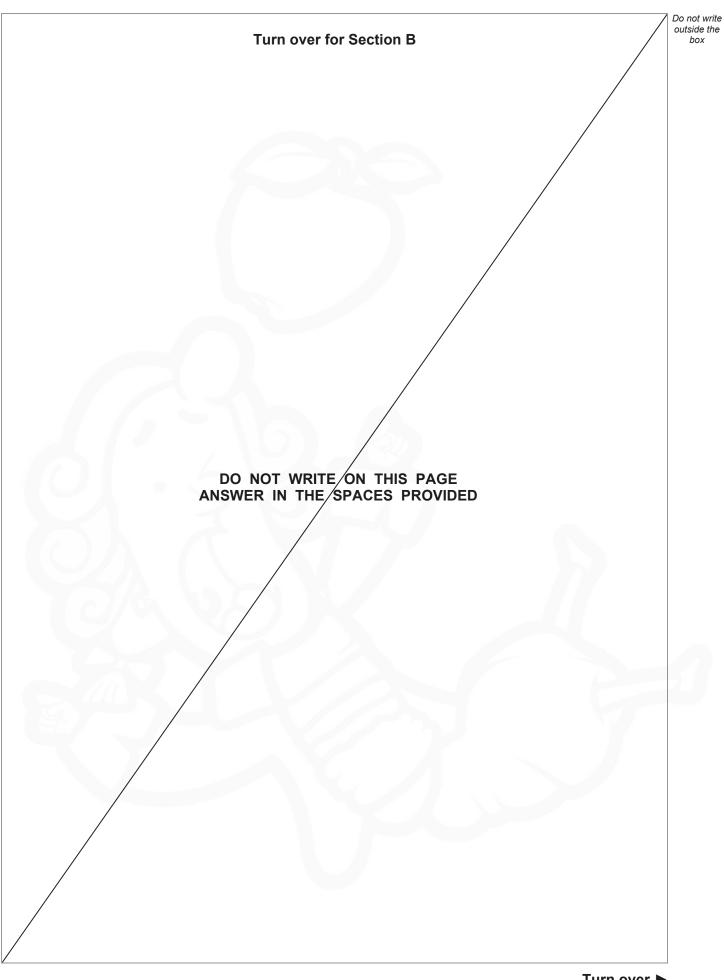

Answer all questions in this section. A student uses a simple pendulum to determine a value for the acceleration g due to gravity. He attaches a small mass to a light string suspended between two wooden locks, as shown in Figure 14. Figure 1 wooden not to scale mass A student uses a metre ruler to measure the length L of the pendulum and records the value as L = 400 mm ± 1 mm. Explain why the student records the absolute uncertainty in L as ± 1 mm. If mark] A the nemoves the mass through a small angle to position A. He releases the mass and determines the time period T by noting the time T₁₀ for 10 oscillations. He records this as T₁₀ = 12.8 s ± 0.1 s. Show that the percentage uncertainty in T is approximately 0.8%. 		Section B	
gravity. He attaches a small mass to a light string suspended between two wooden blocks, as shown in Figure 14. Figure 14 figure 14		Answer all questions in this section.	
<pre>not to scale</pre>		gravity. He attaches a small mass to a light string suspended between t	
The student uses a metre ruler to measure the length <i>L</i> of the pendulum and records the value as <i>L</i> = 400 mm ± 1 mm. I Explain why the student records the absolute uncertainty in <i>L</i> as ± 1 mm. [1 mark] He then moves the mass through a small angle to position A . He releases the mass and determines the time period <i>T</i> by noting the time <i>T</i> ₁₀ for 10 oscillations. He records this as <i>T</i> ₁₀ = 12.8 s ± 0.1 s. I Show that the percentage uncertainty in <i>T</i> is approximately 0.8%.		Figure 14	
The student uses a metre ruler to measure the length L of the pendulum and records the value as $L = 400 \text{ mm} \pm 1 \text{ mm}$. The student uses a metre ruler to measure the length L of the pendulum and records the value as $L = 400 \text{ mm} \pm 1 \text{ mm}$. The student records the absolute uncertainty in L as $\pm 1 \text{ mm}$. [1 mark] He then moves the mass through a small angle to position A . He releases the mass and determines the time period T by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$. Show that the percentage uncertainty in T is approximately 0.8%.			cale
the value as $L = 400 \text{ mm} \pm 1 \text{ mm}$. [1] Explain why the student records the absolute uncertainty in L as $\pm 1 \text{ mm}$. [1] mark] He then moves the mass through a small angle to position A . He releases the mass and determines the time period T by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$. Show that the percentage uncertainty in T is approximately 0.8%.			
[1 mark] He then moves the mass through a small angle to position A . He releases the mass and determines the time period <i>T</i> by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$.			n and records
and determines the time period <i>T</i> by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$. Show that the percentage uncertainty in <i>T</i> is approximately 0.8%.	. 1	Explain why the student records the absolute uncertainty in L as $\pm 1 \text{ mm}$	
and determines the time period <i>T</i> by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$. Show that the percentage uncertainty in <i>T</i> is approximately 0.8%.			
and determines the time period <i>T</i> by noting the time T_{10} for 10 oscillations. He records this as $T_{10} = 12.8 \text{ s} \pm 0.1 \text{ s}$. Show that the percentage uncertainty in <i>T</i> is approximately 0.8%.

1 1

Figure 15 shows a fuel gauge that uses an optical fibre to measure the level of fuel in a container. Light passes along the optical fibre to a detector. The fibre has a series of V-grooves in one of its vertical sections.

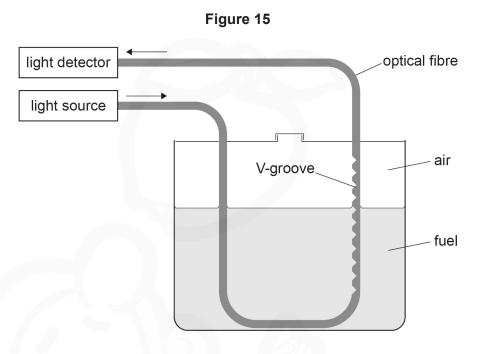

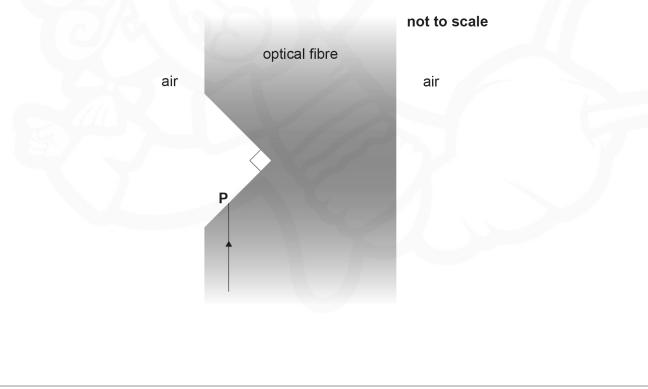

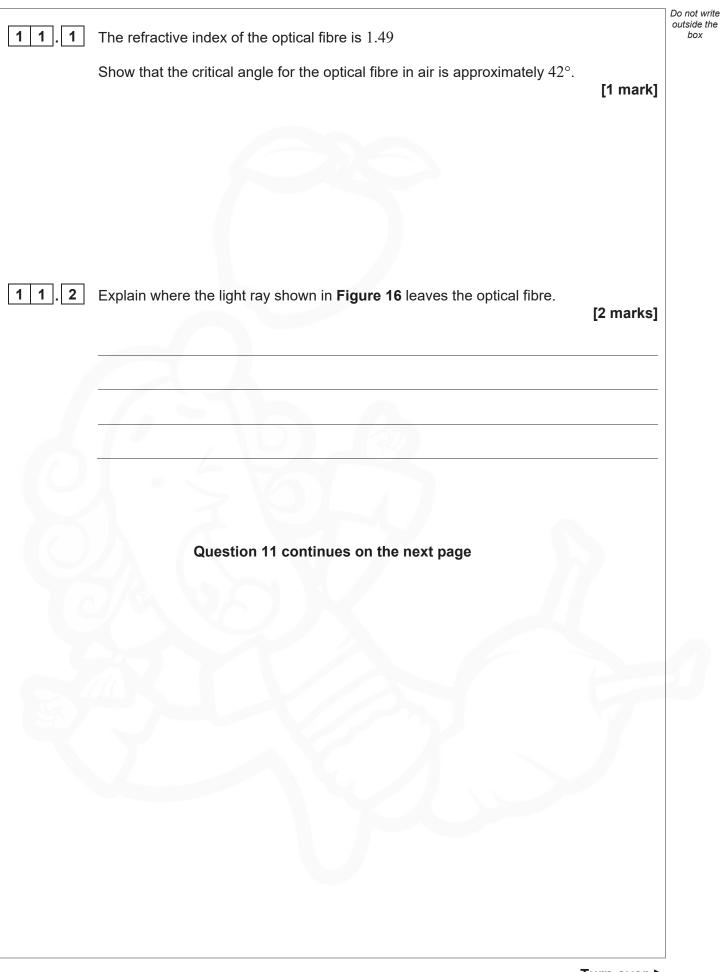

Figure 16 shows a magnified image of one of the grooves when the optical fibre is vertical and surrounded by air. Each groove has an angle of 90° . Light travels vertically up the fibre and is incident on the lower section of the groove at **P**.

1 5

The diagram shows a battery connected to an LDR, a fixed resistor and two ammeters A_1 and A_2 . The internal resistance of the battery is negligible.

The light intensity incident on the LDR increases.

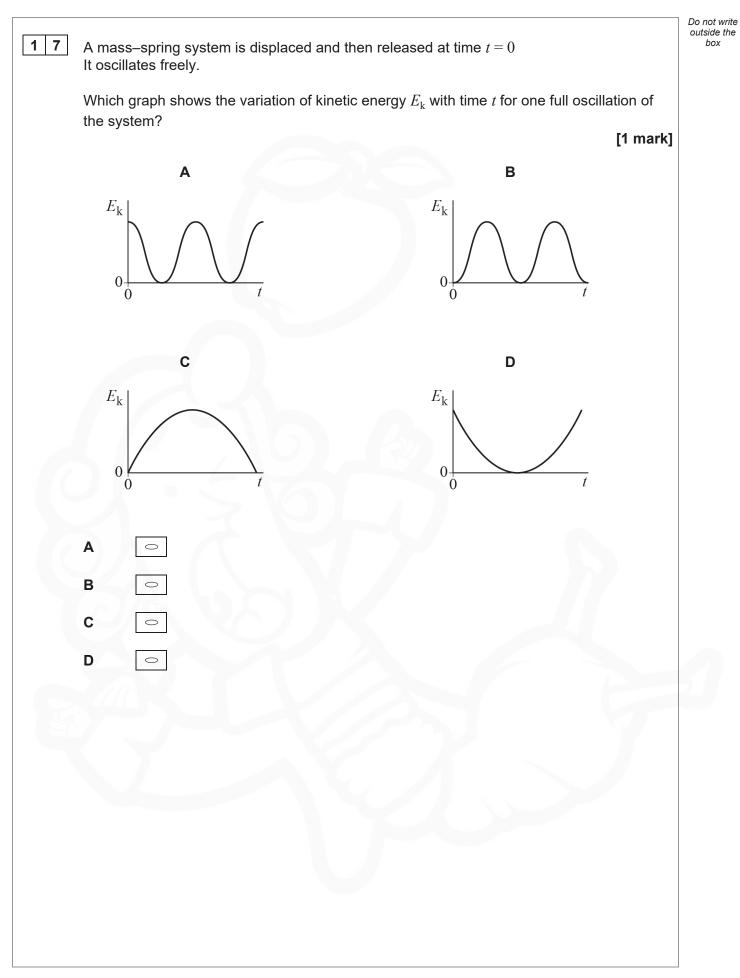

What will be observed on A_1 and A_2 ?

 \mathbf{A}_1 A_2 \bigcirc Α decreasing value no change В increasing value no change \bigcirc decreasing value С decreasing value \bigcirc 0 D increasing value decreasing value

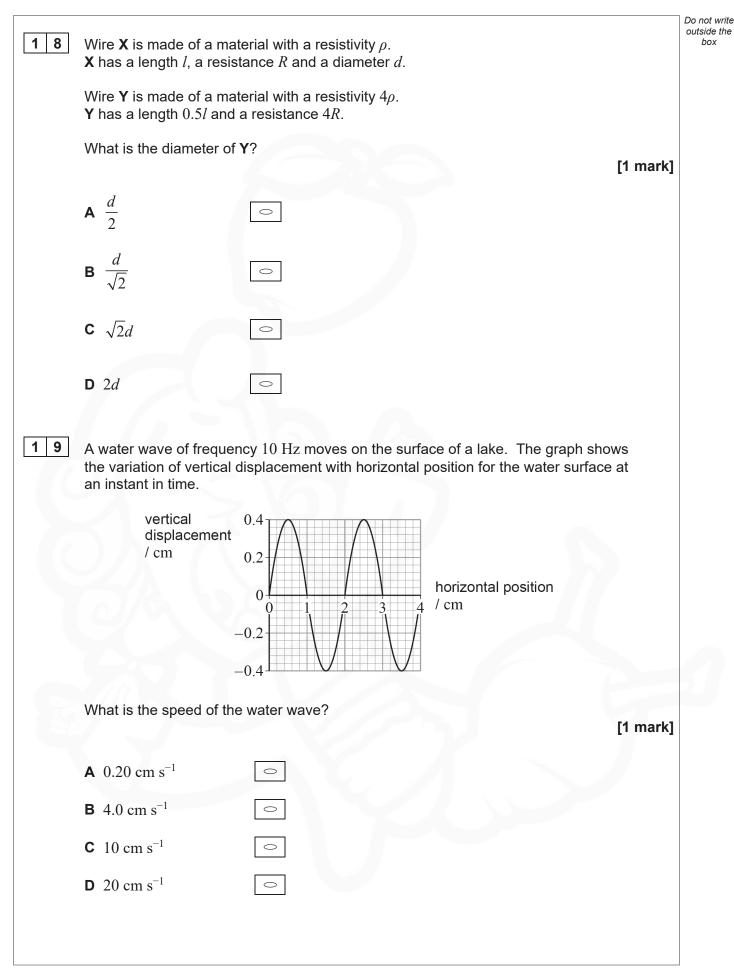

1 6	The diagram shows three energy levels for an atom.	Do not write outside the box
	The vertical positions of the energy levels are to scale.	
	level 2 level 1	
	ground state	
	Electron transitions between these levels produce photons with frequencies of:	
	$5.62 \times 10^{14} \text{ Hz}$ $3.78 \times 10^{15} \text{ Hz}$ $4.34 \times 10^{15} \text{ Hz}.$	
	What is the energy difference between level 1 and the ground state? [1 mark]	
	A 3.7×10^{-19} J	
	B 2.1×10^{-18} J	
	C 2.5×10^{-18} J	
	D 2.9×10^{-18} J	2
	Turn over for the next question
