**Physics B**

Unit **H557A/01**: Fundamentals of physics

Advanced GCE

**Mark Scheme for June 2018**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

© OCR 2018

H557A/01

## Mark Scheme

## LoR annotations required

A level annotation should be used where all marks for a level have been achieved e.g. a candidate has 6 marks, so they would have this annotation on their script:

**L3**

If a candidate has achieved 5 marks then they have reached Level 3 but with one mark omitted. They should have the following annotations on their scripts:

**L3** **^**

The same principle should be applied to Level 2 and Level 1.  
No marks (0) should have a cross.

Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there. If the candidate has continued an answer there then add a tick to confirm that the work has been seen.

Award No Response (NR) if:

- there is nothing written in the answer space

Award Zero '0' if:

- anything is written in the answer space and is not worthy of credit (this includes text and symbols).

Team Leaders must confirm the correct use of the NR button with their markers before live marking commences and should check this when reviewing scripts.

The scoris **comments box** is used by your team leader to explain the marking of the practice responses. Please refer to these comments when checking your practice responses. **Do not use the comments box for any other reason.**

If you have any questions or comments for your team leader, use the phone, the scoris messaging system, or e-mail.

Assistant Examiners will send a brief report on the performance of candidates to your Team Leader (Supervisor) by the end of the marking period. The Assistant Examiner's Report Form (AERF) can be found on the RM Cambridge Assessment Support Portal (and for traditional marking it is in the *Instructions for Examiners*). Your report should contain notes on particular strength displayed as well as common errors or weaknesses. Constructive criticism of the question paper/mark scheme is also appreciated.

H557A/01

## Mark Scheme

Annotations available in Scoris

Annotation	Meaning
	Benefit of doubt given
	Contradiction
	Incorrect response
	Error carried forward
	Follow through
	Not answered question
	Benefit of doubt not given
	Power of 10 error
	Omission mark
	Rounding error
	Error in number of significant figures
	Correct response
	Arithmetic error
	Wrong physics or equation

H557A/01

## Mark Scheme

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

Annotation	Meaning
/	alternative and acceptable answers for the same marking point
(1)	Separates marking points
reject	Answers which are not worthy of credit
not	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
( )	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
ecf	Error carried forward
AW	Alternative wording
ORA	Or reverse argument
(1)m	a method mark, awarded if a correct method is used
(1)e	an evaluation mark, awarded for correct substitution and evaluation

H557A/01

## Mark Scheme

## Section B

Question		Answer	Marks	Guidance
31	(a)	$(\text{power} = 1/f) = 1/v - 1/u$ ✓	L	rearrangement <b>accept</b> real is + sign convention i.e. <b>all</b> signs positive
		$= 1/1.5 - 1/0.03$ ✓	M	substitution with correct sign / all + ve signs
		$= 34$ (D) ✓	M	evaluation <b>not</b> -32.7 (D) / 32.7 (D) / -34 (D)
31	(b)	$(M = v/u = 1.5 / 0.03) = 50$ ✓	L	<b>accept</b> - 50
<b>Total</b>			<b>4</b>	

Question		Answer	Marks	Guidance
32	(a)	time = file size / rate OR $= 1.2 \times 10^9 \times 8 / 24 \times 10^6$ ✓	L	method in words / numbers <b>accept</b> 8 bits per byte missed <b>accept</b> calculation in bytes and bytes/s
		$= 400 \text{ s} > 360 \text{ s}$ OR $400 \text{ s} > 6 \text{ min}$ OR 6.7 min OR 6 min 40 s ✓	L	evaluation <b>must</b> compare answers in secs to 6 minutes <b>accept</b> 6.6 s with / without recurring sign <b>accept</b> 6.8 s from using computer $k = 1024$
32	(b)	8 (kHz) ✓	M	<b>accept</b> labelled diagrams showing waveform being sampled twice per wave / to avoid aliasing
		because there must be at least 2 samples per cycle (to pick up any variation) ✓	M	<b>not</b> because of Nyquist theorem / sampling $f$ must be twice highest signal $f$ / due to information loss
<b>Total</b>			<b>4</b>	

H557A/01

## Mark Scheme

Question		Answer	Marks	Guidance
33	(a)	${}_{84}^{210}\text{Po} + {}_{-1}^0\text{e} + {}_0^0\bar{\nu}$	L L	
33	(b)	to conserve lepton number ✓	L	<b>accept</b> Po lepton number 0 electron is +1 antineutrino is -1 <b>accept</b> to conserve mass energy <b>accept</b> balance as alternative wording for conserve <b>not</b> antineutrino takes away energy
		<b>Total</b>	<b>3</b>	

Question		Answer	Marks	Guidance
34	(a)	$I = \Sigma \varepsilon / \Sigma R = \{12 - 9.0\} / \{17.7\}$ ✓	L	<b>allow</b> first mark for recognition that 3 V drives the current OR for total resistance = 17.7 Ω
		= 0.17 (A) OR 0.169 (A) ✓	M	
34	(b)	$t = Q / I = 0.50 \times 3600 / 0.12$ ✓	L	<b>beware</b> $500 \times 10^{-3} / 0.12 = 4.17$ is nonsense (ratio of two currents) so 0/2 marks  <b>accept</b> 4.17 (hours) from correct method
		= $1.5 \times 10^4$ s = 4.2 (hours) ✓	L	
		<b>Total</b>	<b>4</b>	

H557A/01

## Mark Scheme

Question		Answer	Marks	Guidance
35	(a)	electron forms a <u>standing wave</u> of <u>integer</u> numbers of $\lambda/2$ <u>loops</u> ✓	M	<b>accept</b> $\lambda$ is quantised in $\lambda/2$ loops of standing wave <b>ignore</b> mention of harmonics
		$\lambda$ determines ( $mv$ and hence kinetic) energy ✓	M	<b>accept</b> k.e. = $h^2 / 2m\lambda^2$ <b>not</b> $E = hc / \lambda$
35	(b)	three ✓	L	
35	(c)	max photon energy $\Delta E = E_3 - E_1$ ✓	S&C	<b>accept</b> if substituted into numbers select correct levels 3 and 1 OR $\Delta E = (5.4 - 0.60) \times 10^{-17}$ (J)
		$h^2 / \{2m[2d / 3]^2\} - h^2 / \{2m[2d]^2\} = hf$ OR $4.8 \times 10^{-17}$ (J) ✓	S&C	method <b>accept</b> alternative levels of highest level and 0 energy if $\lambda$ correctly substituted gives $5.4 \times 10^{-17}$ J OR (8.1 OR 8.2) $\times 10^{16}$ Hz for <b>1 mark max</b>
		$f = 7.3 \times 10^{16}$ (Hz) ✓	S&C	evaluation $f = h \{^9/8 - ^1/8\} / [md^2] = 6.6 \times 10^{-34} / \{9.1 \times 10^{-31} \times [10^{-10}]^2\}$ $= 7.3 \times 10^{16}$ (Hz)
		<b>Total</b>	<b>6</b> <b>22</b>	
		<b>Total section B</b>		

H557A/01

## Mark Scheme

## Section C

Question			Answer	Marks	Guidance
36	(a)	(i)	Graph shows proportional relationship (between recession velocity and distance) ✓	L	<b>allow</b> shows straight line through the origin / $v = H_0 d$ <b>not</b> just graph is a straight / statement "this is Hubble's Law" / just shows correlation / + correlation
			If galactic recession is played back in time then earlier on galaxies were closer, at the big bang / origin all matter was at same location and rushing out wards ✓	L	
36	(a)	(ii)	Graph shows background radiation is in the microwave region / (peak) wavelength around 1mm ✓	M	<b>accept</b> is thermal / black body radiation
			Radiation earlier (at big bang) was hotter / shorter $\lambda$ / higher $f$ / X-ray or $\gamma$ -ray AND $\lambda$ has been stretched by the expansion of space (since big bang so that today CMBR is colder) / longer $\lambda$ ✓	M	<b>accept</b> ... AND ( $\lambda$ stretched by cosmological) redshift of photons
36	(b)		$\lambda_{\text{peak}} = 1 \text{ mm}$ read from graph ✓	M	<b>accept</b> in range (0.9 to 1.1) mm
			$f = 3 \times 10^8 / 1 \times 10^{-3} = 3 \times 10^{11} \text{ (Hz)}$ ✓	M	<b>accept</b> in range $(2.7 \text{ to } 3.3) \times 10^{11} \text{ (Hz)}$ <b>accept</b> $E = hf = 1.98 \times 10^{-22} \text{ J}$
			$T \approx hf/5k \approx 6.6(3) \times 10^{-34} \times 3 \times 10^{11} / \{5 \times 1.4 \times 10^{-23}\}$ ✓	H	
			$\approx 2.8 \text{ (K)}$ ✓	H	<b>allow</b> $k = 1.38 \times 10^{-23}$ gives 2.8(9) or 2.9 K for last 2 marks <b>accept</b> in range (2.5 to 3.2) (K)
			<b>Total</b>	<b>8</b>	

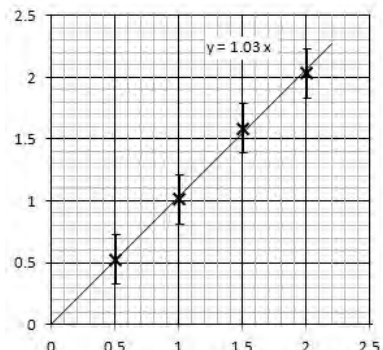

H557A/01

## Mark Scheme

Question			Answer	Marks	Guidance
37	(a)	(i)	$p$ has $\text{kg m s}^{-1}$ = $E/c$ has $\text{kg m}^2 \text{s}^{-2} / \{\text{m s}^{-1}\}$ ✓	L	<b>allow</b> cancellation as implicit <b>allow</b> use of J for unit of energy leading to Ns for momentum <b>accept</b> algebra that mixes units and symbols
37		(ii)	$T = \text{rate of change of momentum OR } = \Delta p / \Delta t$ ✓	L	<b>allow</b> introduction of $\times 2$ at appropriate stage <b>not</b> $P = Fv$
			factor $\times 2$ because $mv - \{-mv\} = 2mv$ ✓	M	<b>accept</b> momentum is reversed <b>no credit</b> for just $\times 2$ with no explanation
			$T = 2n \Delta\{E/c\} / \Delta t = 2n \Delta E / c \Delta t = 2P / c$ ✓	M	<b>must</b> include $n$ number of photons ( $\text{m}^{-2} \text{s}^{-1}$ ) in calculation for third mark
37		(iii)	$a = T \times A / m = 2P \times A / mc$ OR		<b>accept</b> in algebra or numbers
			$= 2 \times 1400 \times 10^6 / \{10^3 \times 3 \times 10^8\}$ ✓	M	
			$= 9.3 \times 10^{-3} \text{ m s}^{-2}$ ✓	M	<b>accept</b> $9.3 \text{ mm s}^{-2}$
37	(b)	(i)	k.e. gained = e.p.e. lost OR $\frac{1}{2} m v^2 = QV$ ✓	L	energy conservation in words / algebra
			$\{mv\}^2 = 2mQV \rightarrow mv/m = \sqrt{\{2VQ/m\}}$		<b>allow</b> momentum per unit mass = velocity and subsequent derivation of $v$
			OR $mv/m = \sqrt{\{2mVQ/m^2\}} \rightarrow v = \sqrt{\{2VQ/m\}}$ ✓	H	
		(ii)	$\text{H}^+$ has highest $Q/m$ ✓	S&C	<b>ignore</b> $\text{Xe}^+$ is safer / energy to lift mass of H from Earth
			so best momentum transfer / larger $p/m$ ✓	S&C	<b>expect</b> momentum comment
		(iii)	$T = \Delta p / \Delta t = \Delta p / \Delta m \times \Delta m / \Delta t$ OR		
			$\Delta m / \Delta t = T / \{\Delta p / \Delta m\} = 0.24 / \sqrt{\{2 \times 2000 \times 9.6 \times 10^7\}}$ ✓	S & C	No credit for only working out velocity of ions
			$= 3.87 \times 10^{-7} \text{ kg s}^{-1}$ ( $< 4 \times 10^{-7} \text{ kg s}^{-1}$ ) ✓	S & C	
			<b>Total</b>	<b>12</b>	

H557A/01

## Mark Scheme

Question		Answer	Marks	Guidance
38	(a)	% uncertainties in $L \ll$ % uncertainties in $y$ ✓ ORA	L	<b>accept</b> % uncertainties in $L$ are negligible on this scale <b>accept</b> estimates e.g. 1 in 1000 mm $\ll$ $\frac{1}{2}$ in 2 mm <b>expect</b> percentage / relative / estimated uncertainties <b>not</b> just uncertainty is less <b>ignore</b> comments on $d$
38	(b)	best fit line <b>expect</b> through the origin but <b>accept</b> lines starting at (0.5,0.5) ✓ <b>accept</b> intercepts up to +2 squares on y-axis or +1 square on x-axis  gradient of best fit line = $(2.25 \times 10^{-3} / 2.2) = 1.0 \times 10^{-3}$ ✓ <b>accept</b> in range $\{0.9 \text{ to } 1.2\} \times 10^{-3}$ (round their values to 1dp) penalise POT error on gradient <b>accept</b> $y/x$ for proportional graphs <b>expect</b> evidence of $\Delta y/\Delta x$ for graphs not through (0,0)  uncertainty by graph of max <b>OR</b> min gradient or by $\pm\%$ ✓ (max gradient = $1.2 \times 10^{-3}$ , min gradient = $0.7 \times 10^{-3}$ ) <b>accept</b> in range $\pm \{0.10 \text{ to } 0.5\} \times 10^{-3} / \pm \{10 \text{ to } 50\}\%$	L  M  H	 <b>accept</b> ecf on POT error on gradient i.e. missing $\times 10^{-3}$ can still score uncertainty mark e.g. $1 \pm 0.2$  <b>allow</b> a little pessimism comparing to max or min gradients through data

H557A/01

## Mark Scheme

Question		Answer	Marks	Guidance
38	(c)	$\lambda = d \times \text{grad} = 0.50 \times 10^{-3} \times 1.03 \times 10^{-3} = 5.2 \times 10^{-7} \text{ (m)}$ ✓ <b>accept</b> values in the range 450 to 600 nm and consistent with their gradient from (b)	<b>M</b>           <b>H</b>	<b>allow</b> ecf on gradient value from (ii) <b>accept</b> 515 nm <b>accept</b> use of $\lambda = d \times \sin \theta$ (with $n = 1$ ) <b>accept</b> ecf grad $\pm$ % from (ii)
		relative uncertainty in $d$ expressed as $\pm 20\%$ / $\pm 0.2$ ✓  <b>evaluation</b> combining uncertainties from grad and $d$ to get overall uncertainty. Credit values in range of $\{\pm 30\%$ to $\pm 70\%\}$ of their $\lambda$ estimate  overall uncertainty in range $\pm 150 \text{ nm}$ to $360 \text{ nm}$ ✓		
38	(d)	<b>refine design:</b> use travelling microscope to measure $d$ or $y$ or both more precisely ✓    <b>OR refine procedure:</b> repeat measurements (to improve cluster and improve precision)	<b>L</b>	<b>accept</b> other sensible improvements in apparatus e.g. increase $L$ so $y$ is larger <b>OR</b> measure a larger number of fringes / increase $d$ to see more fringes / decrease $d$ to increase fringe separation ( changing $d$ needs justification for credit)  <b>not</b> just measure $d$ or $y$ more precisely <b>OR</b> make $y$ larger <b>accept</b> use of tube to exclude background light / use of brighter lamp / use of collimator round lamp to improve fringe contrast
		<b>Total</b>

## Mark Scheme

Question			Answer	Marks	Guidance
41	(a)	i	Field at point X from one proton is equal and opposite to that from the other proton AW ✓	L	<b>accept</b> Force per unit / test charge at point X ..... <b>not</b> just fields cancel
41	(a)	ii	Potential = $2 \times (9 \times 10^9 \times 1.6 \times 10^{-19}) / 0.5 \times 10^{-9}$ ✓ = 5.8 (V) ✓	L M	<b>accept</b> 5.7 if $8.98 \times 10^9$ used for $k$ <b>allow</b> 2.9 (V) for for MAX 1 (missing x2)
41	(b)	i	Force on third proton due to one other in triangle = $(9 \times 10^9 \times (1.6 \times 10^{-19})^2) / (1 \times 10^{-9})^2$ ✓ = $2.3 \times 10^{-10}$ N ✓ horizontal components will cancel (can show on diagram) ✓ sum of vertical components = $2 \times 2.3 \times 10^{-10} \times \sin 60^\circ = 3.98 \times 10^{-10}$ (N) ✓	M M H H	Look for final answer and if not correct work through scheme to credit each marking point achieved. <b>accept</b> shown by vector addition triangle or use of $\cos 30^\circ$ or $\sin 60^\circ$ <b>accept</b> use of $\cos 30^\circ$ <b>accept</b> $4.0 \times 10^{-10}$ (N) in this instance
41	(b)	ii	Force = $3.98 \times 10^{-10}$ N $\times (1 \times 10^{-9})^2 / (1 \times 10^{-15})^2$ ✓ = 398 (N) ✓	H S&C	<b>accept</b> $4.0 \times 10^{-10}$ (N) or ecf from b(i) <b>accept</b> force scaled up $\times \{10^{-9} / 10^{-15}\}^2 = 10^{12}$ <b>accept</b> 400 (N)
			<b>Total</b>	<b>9</b>	
			<b>Total section C</b>	<b>58</b>	
			<b>Total sections B &amp; C</b>	<b>80</b>
